DETAILED ACTION

Allowable Subject Matter

1. Claims 1-7 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claim 1 recites a "transmission and reception device" comprising the recited "two transmission branches", "hybrid combiner" and "internal changeover device".

No prior art was found teaching individually, or suggesting in combination, the combination of claim 1, specifically a second mode of operation for high output power, wherein the two transmission branches are additionally connected to one another by means of an internal changeover device such that the same transmitted signal is routed via at least the output stages of both transmission branches.

Csapo et al. (US 6,411,825) and Jantti (US 6,317,610) disclose two transmission branches connected to a transmission connection via an incorporated hybrid combiner (or combiner) in order to provide two mutually combined carriers (See Fig. 7- Csapo et al and Fig. 1 - Jantti).

However, both Csapo et al and Jantti systems fail to disclose or teach the carriers being combined by the hybrid combiner in a first mode of operation and a second mode of operation for high output power, wherein the two transmission branches are additionally connected to one another by means of an internal changeover device such that the same transmitted signal is routed via at least the output stages of both transmission branches.
